Experiment -2

Property Buying & Rental System Using Zoho One (SaaS)

Aim

To create a Property Buying and Rental System for Chennai city using Zoho One as a cloudbased Software as a Service (SaaS) application.

Procedure

1. Log in to the Zoho One cloud platform using your credentials.

2. Open Zoho Creator from the list of applications.

3. Create a new application named Property Buying and Rental System using a pre-designed template.

4. Select an appropriate template and customize it according to the requirements of the property buying and rental process in Chennai city.

5. Open the existing form and add or modify fields to include the following property details:

    - Name
    - Property Requirement (Buy / Rent)
    - Property Type (Residential / Commercial)
    - Property Agreement (Rental Agreement / Sale Agreement)
    - Area
    - Place (Location in Chennai)
    - Budget Range
    - Property Value
    - Property Area (in sq. ft.)
    - Number of Bedrooms
    - Contact Number

6. Configure the field types appropriately by using dropdowns for property requirement, property type, and agreement type; text fields for name, area, and place; dropdowns or number fields for budget range and property value; and suitable number fields for property area and number of bedrooms. Use a phone field for the contact number.

7. Customize the form layout by arranging the fields properly and making essential fields mandatory.

8. Save the changes and publish the customized application.

9. Enter sample property details into the form, such as Rent as the property requirement, Residential as the property type, Velachery, Chennai as the location, and the required budget range, property value, and rental agreement details.

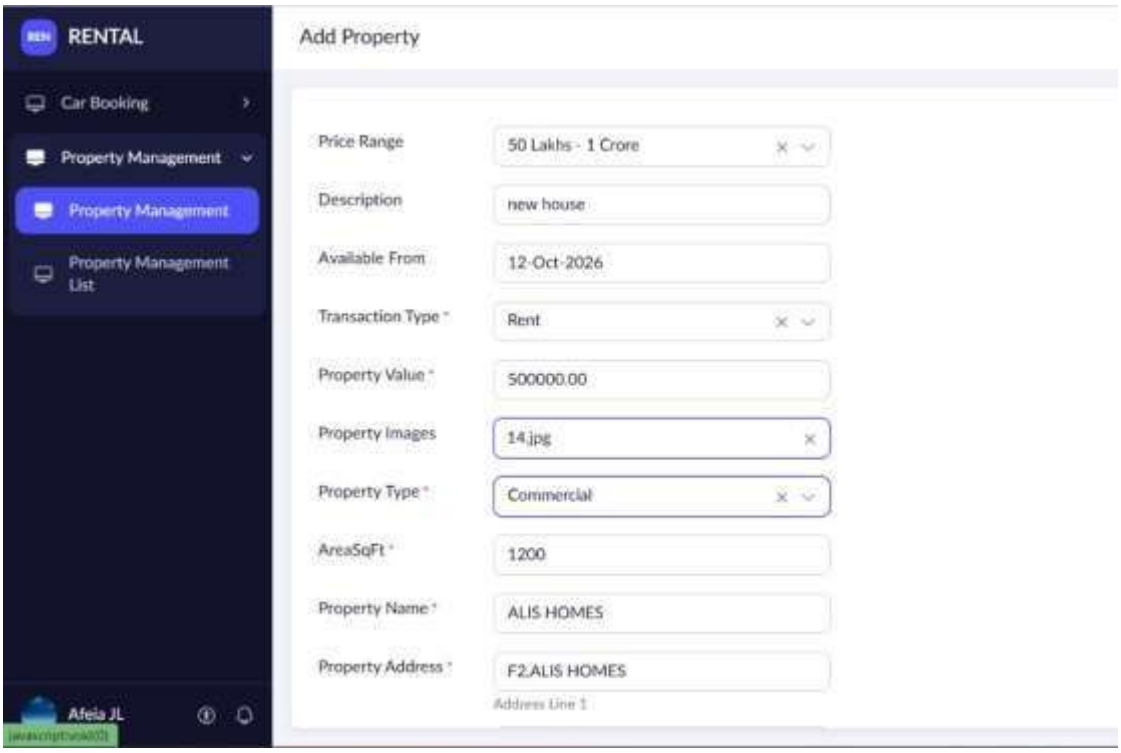

10. Submit the form and verify that the entered property details are stored correctly in the cloud database.

11. Open the property records section to view the submitted details and test the application with different combinations of buying, renting, residential, commercial, and location preferences.

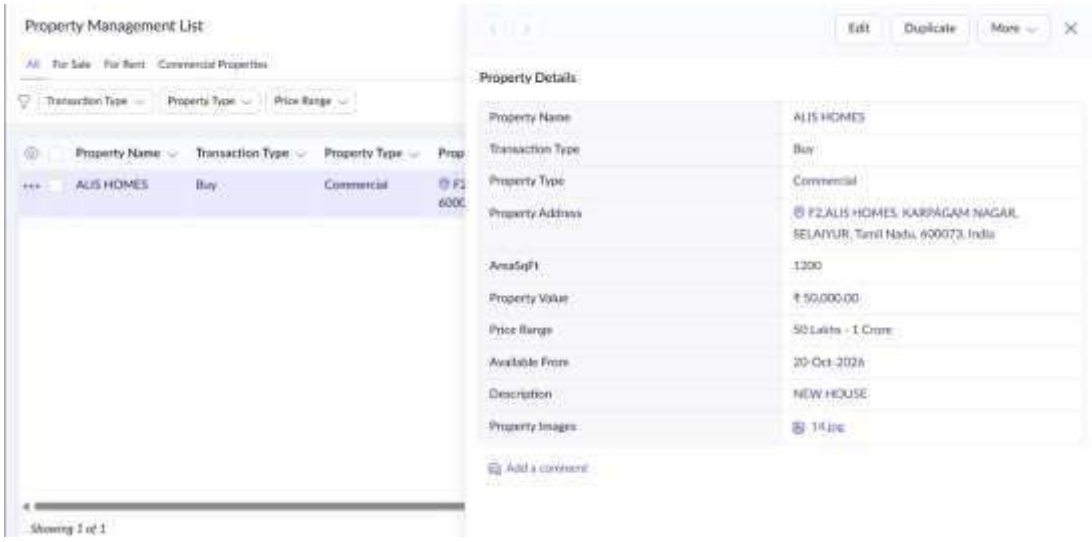

12. Verify that the Property Buying and Rental System works successfully as a SaaS application by allowing users to enter, submit, and view property details through the cloud platform.

6.
