Experiment -5

Mark Sheet Processing System Using Zoho One (SaaS)

Aim

To create a Car Booking Reservation System using Zoho One as a cloud-based Software as a Service (SaaS) application.

Procedure

1. Log in to the Zoho One cloud platform using your credentials.

2. Open Zoho Creator from the list of applications.

3. Create a new application named Mark Sheet Processing System using a pre-designed template.

4. Select an appropriate template and customize it according to the requirements of the mark sheet processing system.

5. Open the existing form and add or modify fields to include the following student details:

- Student Name
- Register Number
- Course
- Semester
- Subject 1 Marks
- Subject 2 Marks
- Subject 3 Marks
- Subject 4 Marks
- Subject 5 Marks
- Total Marks
- Average
- Percentage
- Rank
- Overall Performance
- Result (Pass / Fail)

6. Configure the field types appropriately by using text fields for student name and register number; dropdowns for course, semester, and result; number fields for subject marks and rank; and decimal or percentage fields for average and percentage.

7. Customize the form layout by arranging the fields properly and making essential fields mandatory. Configure the calculations using the following formulas:

Total Marks

Total Marks = Sum of marks in all subjects

Average

Average = Total Marks / Number of Subjects

Percentage

Percentage = (Total Marks / Maximum Total Marks) × 100

8. Configure the overall performance based on the percentage obtained:

- 90% and above – Excellent
- 75% to 89% – Very Good
- 60% to 74% – Good
- 50% to 59% – Average
- Below 50% – Needs Improvement

9. Save the changes and publish the customized application so that authorized users can access it through a web browser.

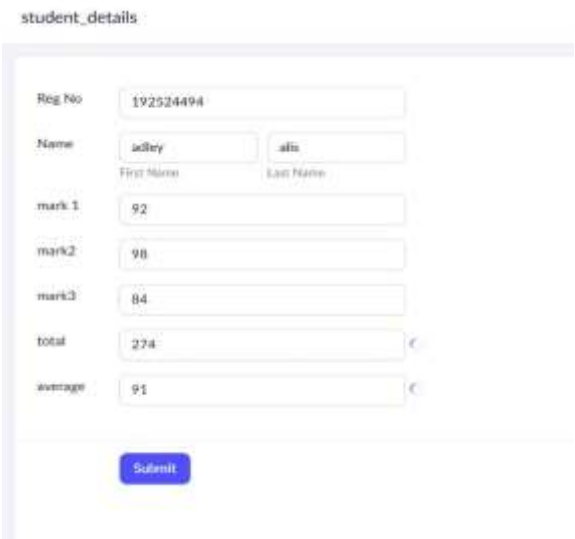

10. Enter sample student details into the form, including the student's name, register number, course, semester, and marks obtained in each subject.

11. Submit the form and verify that the student details, total marks, average, percentage, rank, and overall performance are stored correctly in the cloud database.

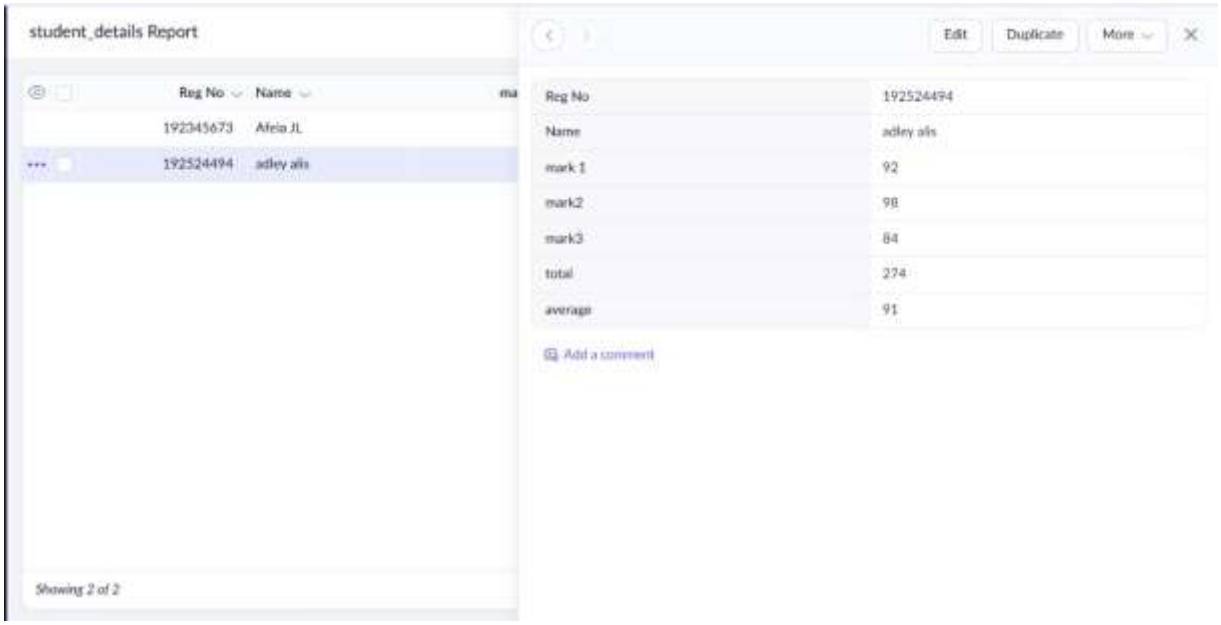

12. Open the student records section to view the processed mark sheets and test the application with different marks and student records.

13. Verify that the Mark Sheet Processing System works successfully as a SaaS application by allowing authorized users to enter, process, and view student mark sheets through the cloud platform.

Implementation Input:

Output:

Result

Thus, a Mark Sheet Processing System was successfully created using Zoho One and demonstrated as a Software as a Service (SaaS) application. The application enables users to store student details, process marks, calculate averages and percentages, and display overall academic performance through a cloud-based platform.
