Experiment -6

Payroll Processing System Using Zoho One (SaaS)

Aim

To create a simple cloud software application for a Payroll Processing System using Zoho One as a cloud-based Software as a Service (SaaS) application.

Procedure

1. Log in to the Zoho One cloud platform using your credentials.

2. Open Zoho Creator from the list of applications.

3. Create a new application named Payroll Processing System using a pre-designed template.

4. Select an appropriate template and customize it according to the requirements of the employee payroll processing system.

5. Open the existing form and add or modify fields to include the following employee and payroll details:

- Employee ID
- Name of the Employee
- Department
- Designation
- Experience in Present Organization
- Overall Experience
- Basic Pay
- House Rent Allowance (HRA)
- Dearness Allowance (DA)
- Travel Allowance (TA)
- Other Allowances
- Gross Pay
- Provident Fund (PF)
- Other Deductions
- Net Pay
- Pay Month

6. Configure the field types appropriately by using text fields for employee name, ID, department, and designation; number fields for experience; currency or decimal fields for basic pay, allowances, and deductions; and dropdowns for department and pay month.

7. Customize the form layout by arranging the fields properly and making essential fields mandatory. Configure the payroll calculations using the following formulas:

Gross Pay

Gross Pay = Basic Pay + HRA + DA + TA

Net Pay

Net Pay = Gross Pay - PF- INCOME TAX-LOP

8. Save the changes and publish the customized application so that authorized users can access it through a web browser.

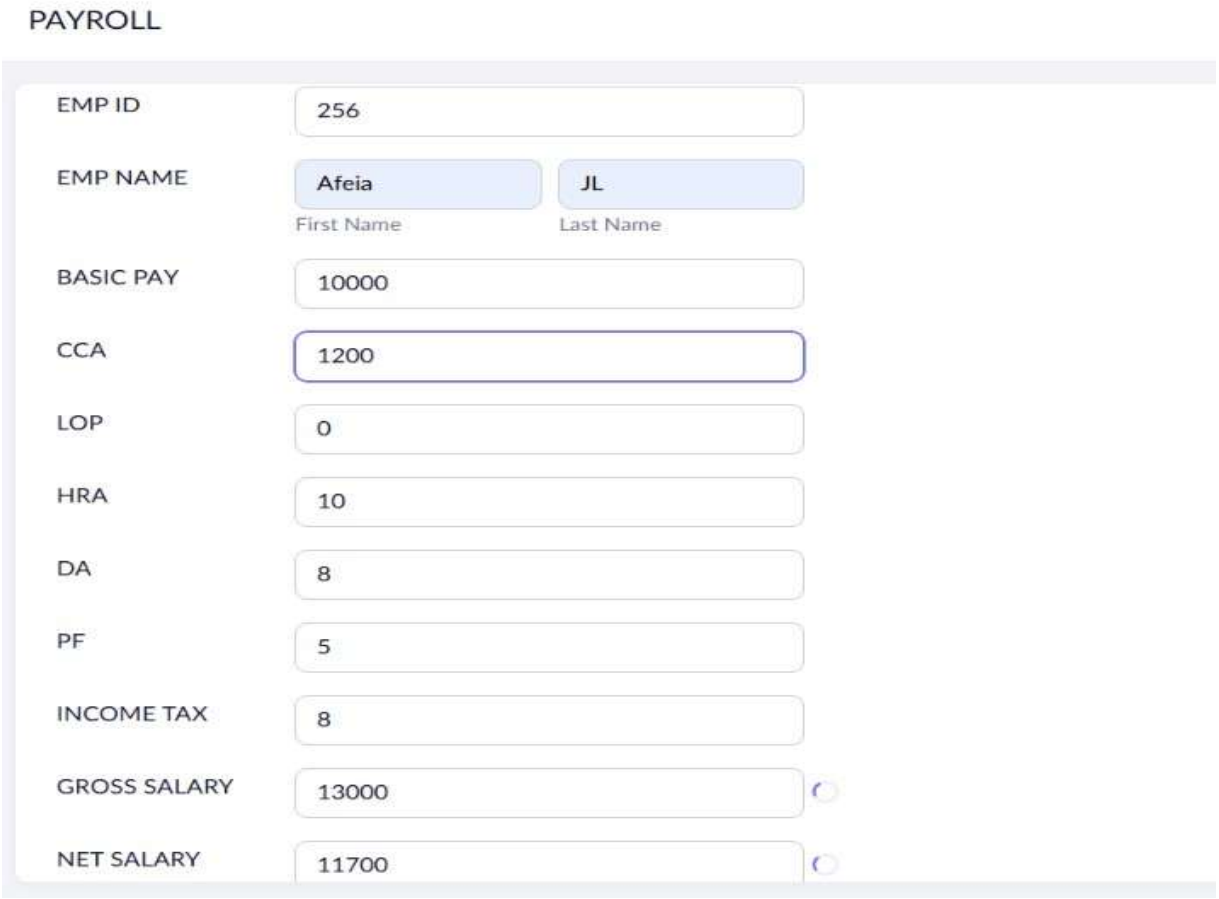

9. Enter sample employee and salary details into the form, including the employee name, department, experience, basic pay, allowances, and deductions.

10. Submit the form and verify that the entered employee and payroll details are stored correctly in the cloud database.

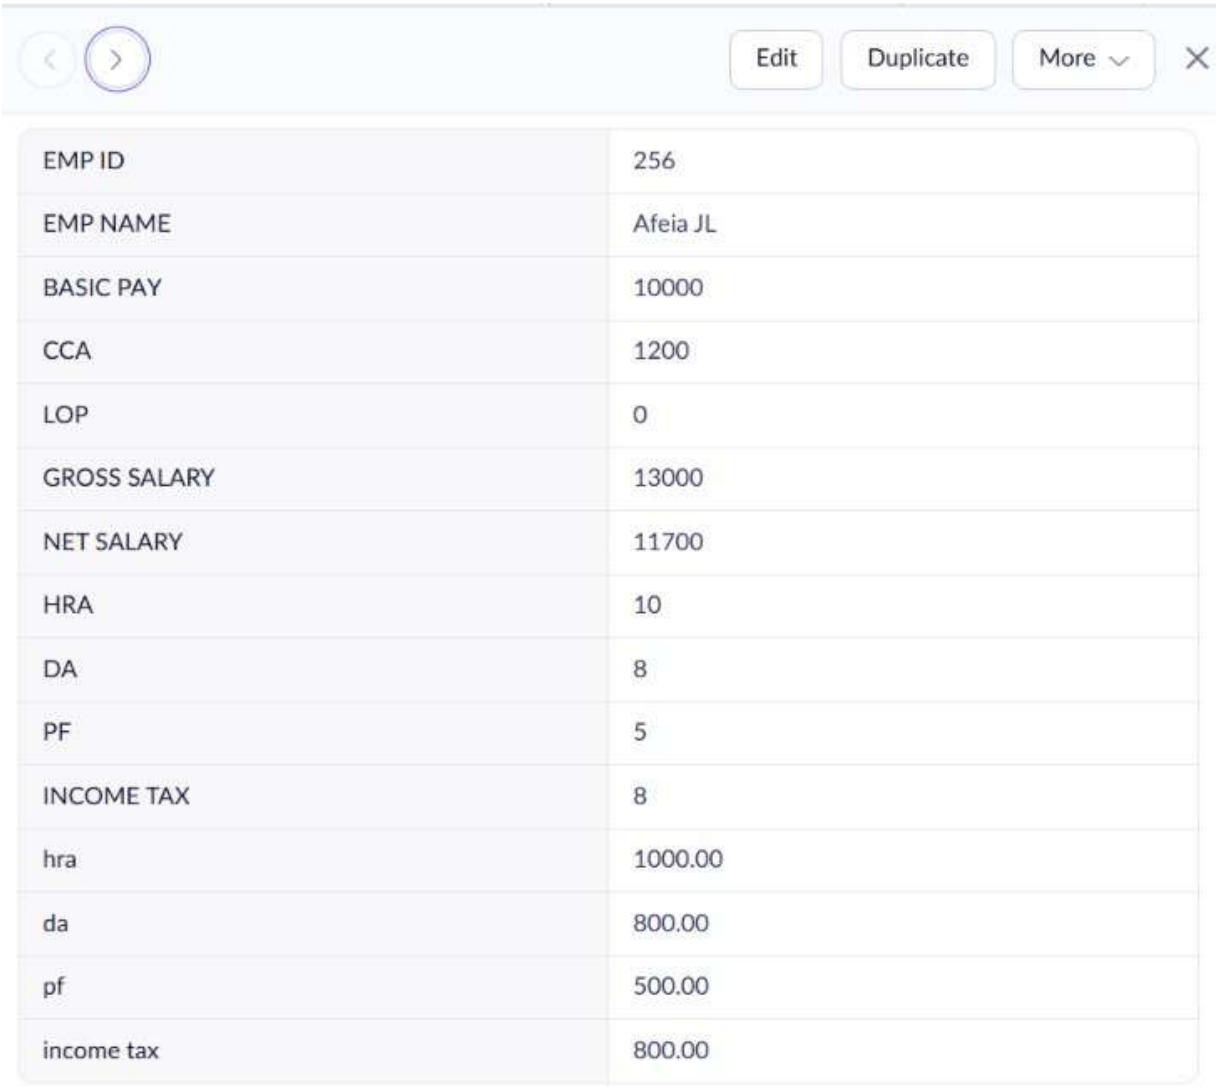

11. Open the payroll records section to view the processed salary details and test the application with different employee salaries, allowances, and deductions.

12. Verify that the Payroll Processing System works successfully as a SaaS application by allowing authorized users to enter, process, and view employee payroll details through the cloud platform.

Implementation Input:

Output:

EMP ID	256
EMP NAME	Afeia JL
BASIC PAY	10000
CCA	1200
LOP	0
GROSS SALARY	13000
NET SALARY	11700
HRA	10
DA	8
PF	5
INCOME TAX	8
hra	1000.00
da	800.00
pf	500.00
income tax	800.00

Result

Thus, a Payroll Processing System was successfully created using Zoho One and demonstrated as a Software as a Service (SaaS) application. The application enables users to store employee details, calculate gross pay and net pay, and manage payroll records through a cloud-based platform.
