Experiment -7

Students Attendance System Using Zoho One (SaaS)

Aim

To create a Students Attendance System using Zoho One as a cloud-based Software as a Service (SaaS) application.

Procedure

1. Log in to the Zoho One cloud platform using your credentials.

2. Open Zoho Creator from the list of applications.

3. Create a new application named Students Attendance System using a pre-designed template.

4. Select an appropriate template and customize it according to the requirements of the student attendance management system.

5. Open the existing form and add or modify fields to include the following student attendance details:

- Student Name
- Student ID
- Course
- Subject
- Attendance Date
- Attendance Status (Present / Absent)
- Course Attendance
- OD Request (Yes / No)
- OD Approval Status (Pending / Approved / Rejected)
- Total Classes Conducted
- Classes Attended
- Attendance Percentage
- Grade

6. Configure the field types appropriately by using text fields for student name and ID; dropdowns for course, subject, attendance status, OD request, approval status, and grade; date fields for attendance date; and number fields for total classes conducted and classes attended. Use a percentage or decimal field for attendance percentage.

7. Customize the form layout by arranging the fields properly and making essential fields mandatory. Configure the attendance percentage using the formula:

Attendance Percentage = (Classes Attended / Total Classes Conducted) × 100

8. Save the changes and publish the customized application.

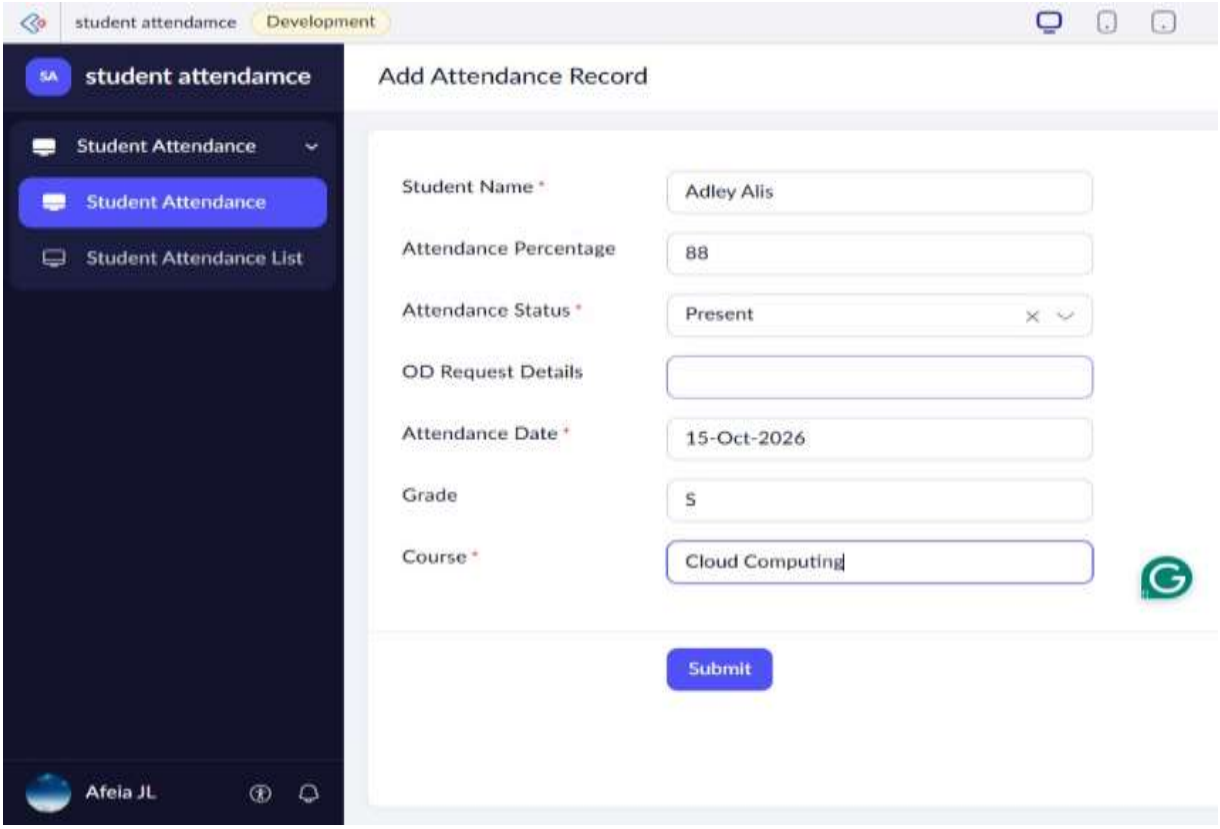

9. Enter sample student attendance details into the form, such as student name Afeia, course B.Tech AIDS, subject Cloud Computing, attendance status Present, and the required course attendance and OD request details.

10. Submit the form and verify that the entered student attendance details are stored correctly in the cloud database.

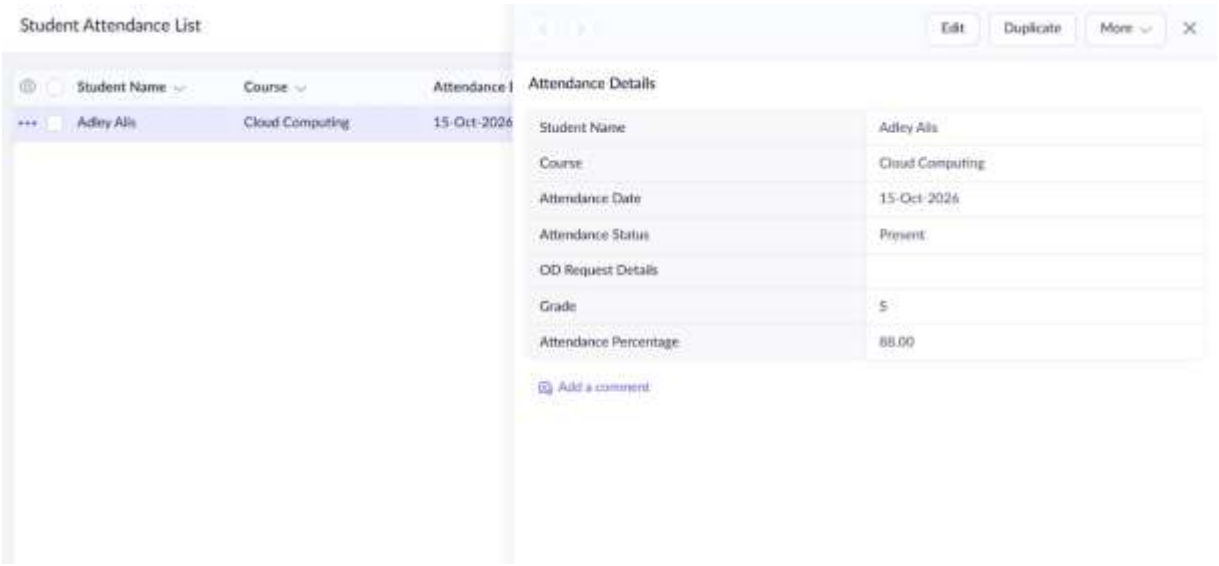

11. Open the attendance records section to view the submitted details and test the application with different combinations of Present, Absent, and OD requests. Verify that the attendance percentage is calculated correctly.

12. Verify that the Students Attendance System works successfully as a SaaS application by allowing users to enter, submit, and view attendance records through the cloud platform.

Implementation Input:

Output:

Result

Thus, a Students Attendance System was successfully created using Zoho One and demonstrated as a Software as a Service (SaaS) application.
