Experiment -8

Student Counselling System Using Zoho One (SaaS)

Aim

To create a simple Student Counselling System using Zoho One as a cloud-based Software as a Service (SaaS) application.

Procedure

1.Log in to the Zoho One cloud platform using your credentials.

2. Open Zoho Creator from the list of applications.

3. Create a new application named Student Counselling System using a pre-designed template.

4. Select an appropriate template and customize it according to the requirements of the student counselling system.

5. Open the existing form and add or modify fields to include the following student details:

- Student Name
- Age
- Address
- Phone Number
- Email ID
- Subjects Studied
- Year of Passing
- Percentage of Marks
- Domain of Interest
- Preferred Course
- Counselling Date
- Counselling Status

6. Configure the field types appropriately by using text fields for student name, address, and subjects studied; number fields for age and year of passing; a phone field for phone number; an email field for email ID; a percentage or decimal field for marks; and dropdowns for domain of interest, preferred course, and counselling status.

7. Customize the form layout by arranging the fields properly and making essential fields mandatory.

8. Save the changes and publish the customized application.

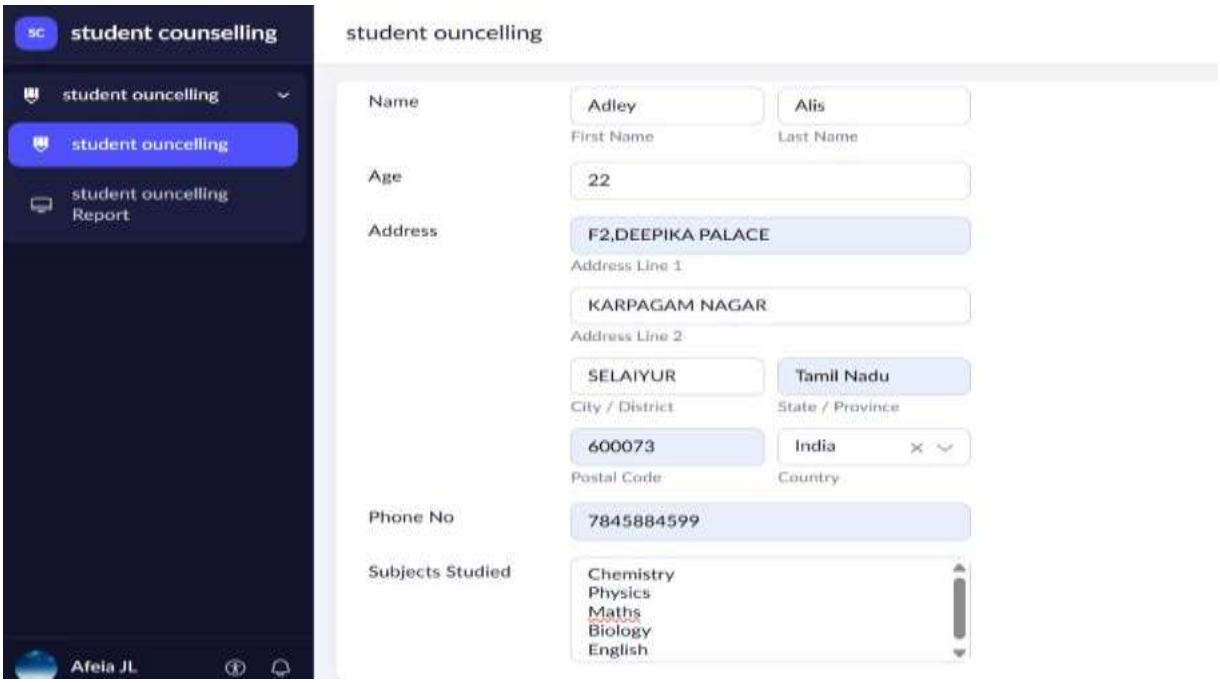

9. Enter sample student details into the form, such as the student's name, age, subjects studied, year of passing, percentage of marks, and preferred domain of interest.

10. Submit the form and verify that the entered student details are stored correctly in the cloud database.

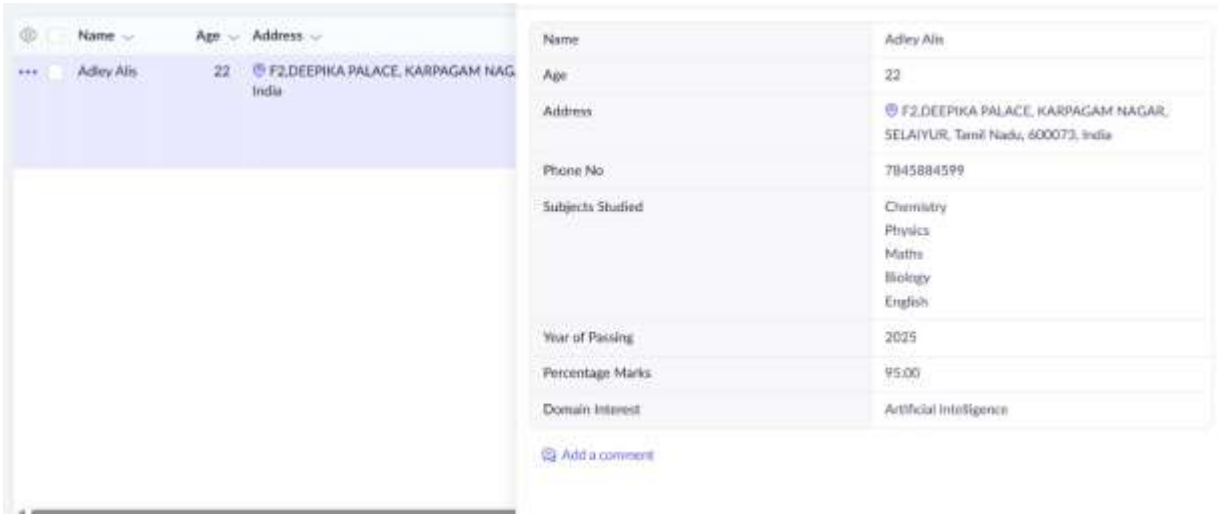

11. Open the student records section to view the submitted details and test the application with different combinations of academic qualifications, marks, and domain interests.

12. Verify that the Student Counselling System works successfully as a SaaS application by allowing users to enter, submit, and view student counselling details through the cloud platform.

Implementation Input:

Output:

Result

Thus, a Student Counselling System was successfully created using Zoho One and demonstrated as a Software as a Service (SaaS) application.
