Experiment -3

Flight Reservation System Using Zoho One (SaaS)

Aim

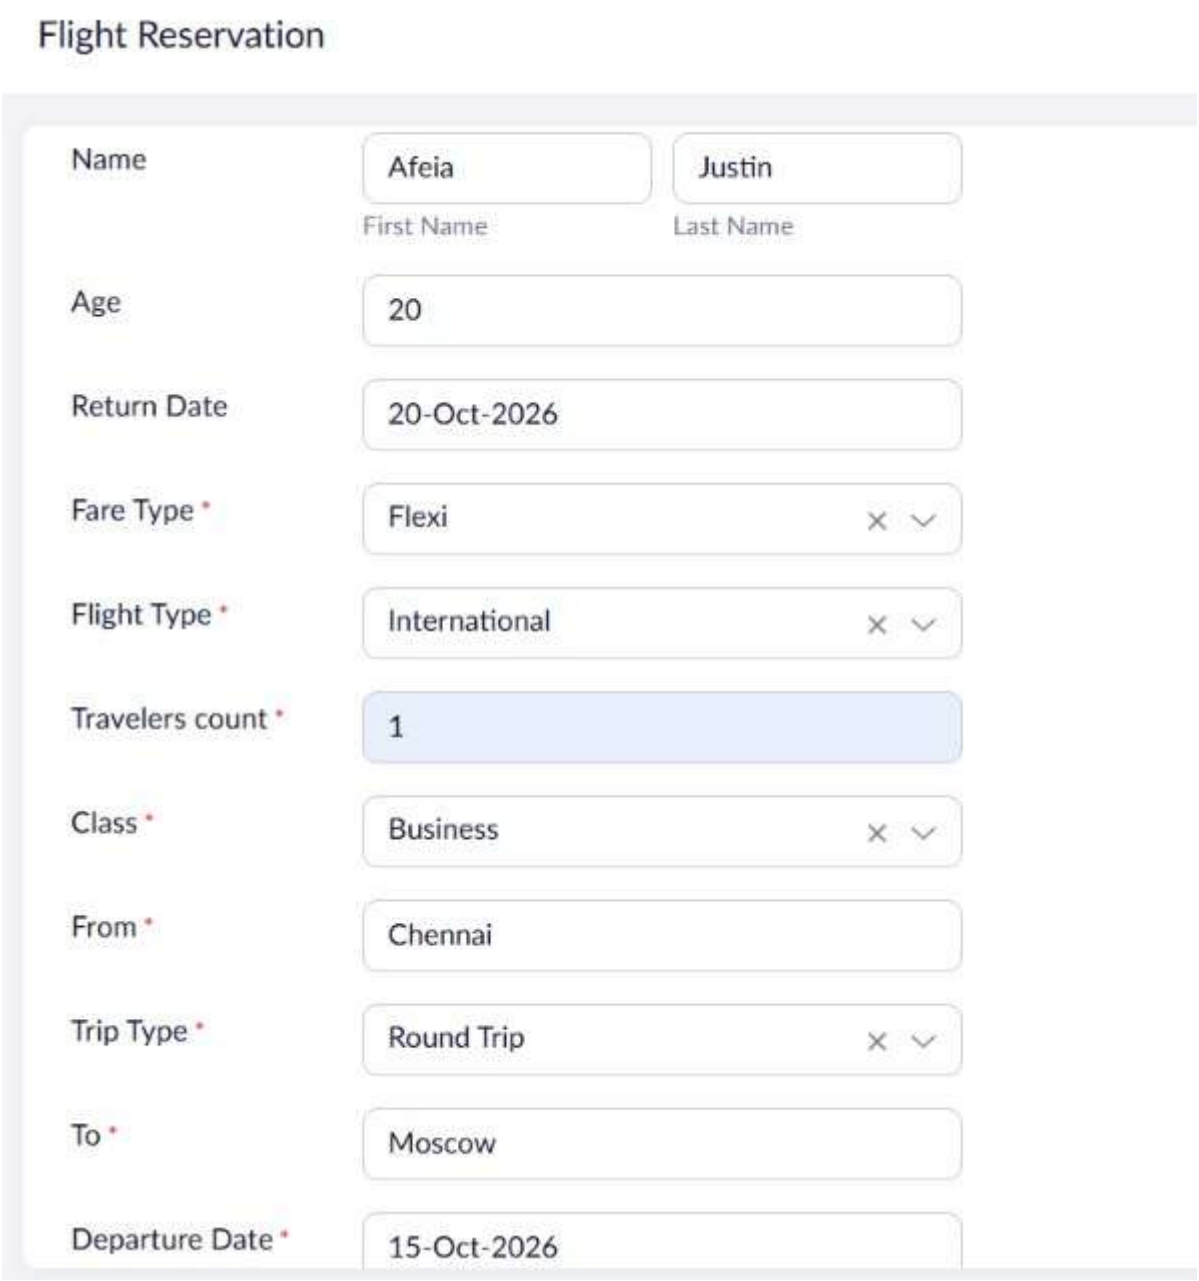

To create a Flight Reservation System using Zoho One as a cloud-based Software as a Service (SaaS) application.

Procedure

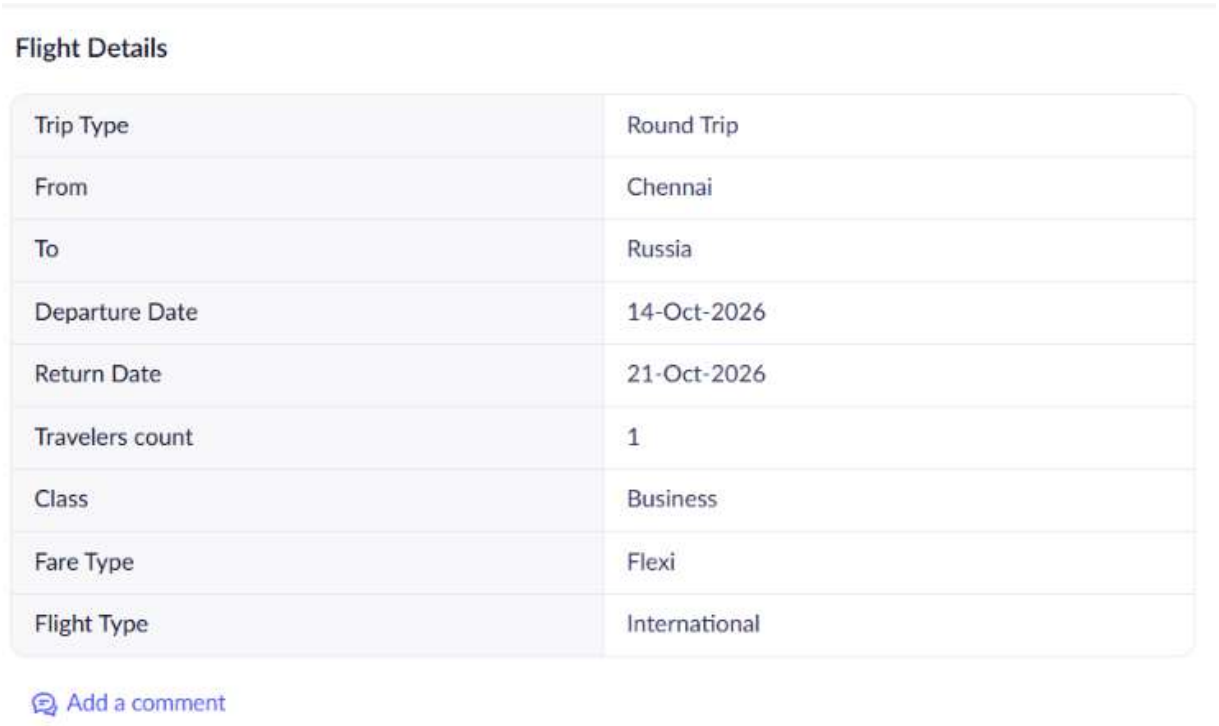

1. Log in to the Zoho One cloud platform using your credentials.
2. Open Zoho Creator from the list of applications.
3. Create a new application named Flight Reservation System using a pre-designed template.
4. Select an appropriate template and customize it according to the requirements of the flight reservation system.
5. Open the existing form and add or modify fields to include the following flight details:
    - Trip Type (One Way / Round Trip)
    - From
    - To
    - Departure Date
    - Return Date
    - Travelers Count
    - Class (Economy / Business / First Class)
    - Fare Type (Flexi / Saver)
    - Flight Type (Domestic / International)
6. Configure the field types appropriately by using dropdowns for trip type, class, fare type, and flight type; text fields for departure and destination; date fields for departure and return dates; and a number field for travelers count.
7. Customize the form layout by arranging the fields properly and making essential fields mandatory.
8. Save the changes and publish the customized application.
9. Enter sample flight reservation details into the form, such as Chennai as the source, Russia as the destination, Round Trip as the trip type, and the required travel dates and class.
10. Submit the form and verify that the entered flight details are stored correctly in the cloud database.

11. Open the reservations or records section to view the submitted flight booking details and test the application with different combinations of trip types, destinations, classes, and fare types.
12. Verify that the Flight Reservation System works successfully as a SaaS application by allowing users to enter, submit, and view flight reservation details through the cloud platform.

Implementation Input:

Output:

Flight Details

Trip Type	Round Trip
From	Chennai
To	Russia
Departure Date	14-Oct-2026
Return Date	21-Oct-2026
Travelers count	1
Class	Business
Fare Type	Flexi
Flight Type	International

Add a comment

Result

Thus, a Flight Reservation System was successfully created using Zoho One and demonstrated as a Software as a Service (SaaS) application.
