Experiment -9

Hospital Information System for SIMATS Hospital Using Zoho One (SaaS)

Aim

To create a simple Hospital Information System for SIMATS Hospital using Zoho One as a cloud-based Software as a Service (SaaS) application.

Procedure

1. Log in to the Zoho One cloud platform using your credentials.

2. Open Zoho Creator from the list of applications.

3. Create a new application named SIMATS Hospital Information System using a pre-designed template.

4. Select an appropriate template and customize it according to the requirements of the hospital information system.

5. Open the existing form and add or modify fields to include the following patient details:

- Patient ID
- Patient Name
- Age
- Gender
- Address
- Phone Number
- Email ID
- Attender Name
- Attender Phone Number
- Doctor Name
- Department
- Disease / Health Problem
- Date of Admission
- Patient Type (Outpatient / Inpatient)
- Treatment Details
- Patient Status (Admitted / Discharged)

6. Configure the field types appropriately by using text fields for patient name, address, attender name, and disease details; number fields for age; phone fields for patient and attender contact numbers; an email field for email ID; dropdowns for gender, department, patient type, and patient status; and date fields for admission details.

7. Customize the form layout by arranging the fields properly and making essential fields mandatory.

8. Save the changes and publish the customized application so that authorized hospital staff can access it through a web browser.

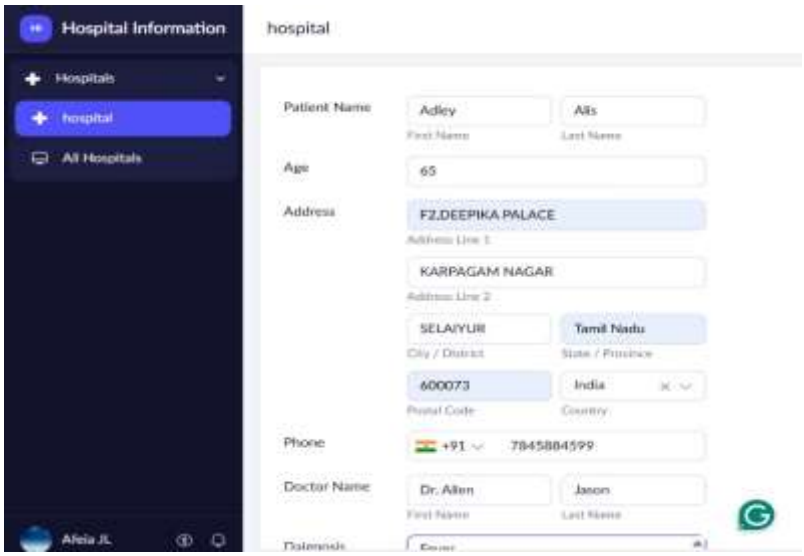

9. Enter sample patient details into the form, such as the patient's name, age, address, attender details, doctor name, department, and disease.

10. Submit the form and verify that the entered patient details are stored correctly in the cloud database.

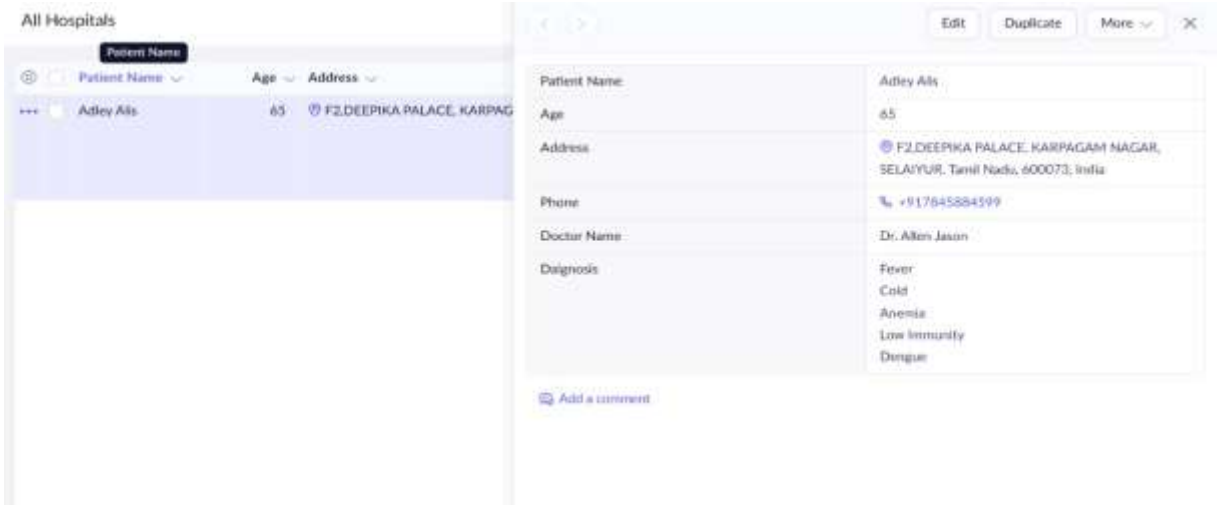

11. Open the patient records section to view the submitted details and test the application with different patient records, departments, doctors, and admission statuses.

12. Verify that the Hospital Information System works successfully as a SaaS application by allowing authorized users to enter, submit, and view patient information through the cloud platform.

Implementation Input:

Output:

Result

Thus, a Hospital Information System for SIMATS Hospital was successfully created using Zoho One and demonstrated as a Software as a Service (SaaS) application.
