Experiment -1

Car Booking Reservation System Using Zoho One (SaaS)

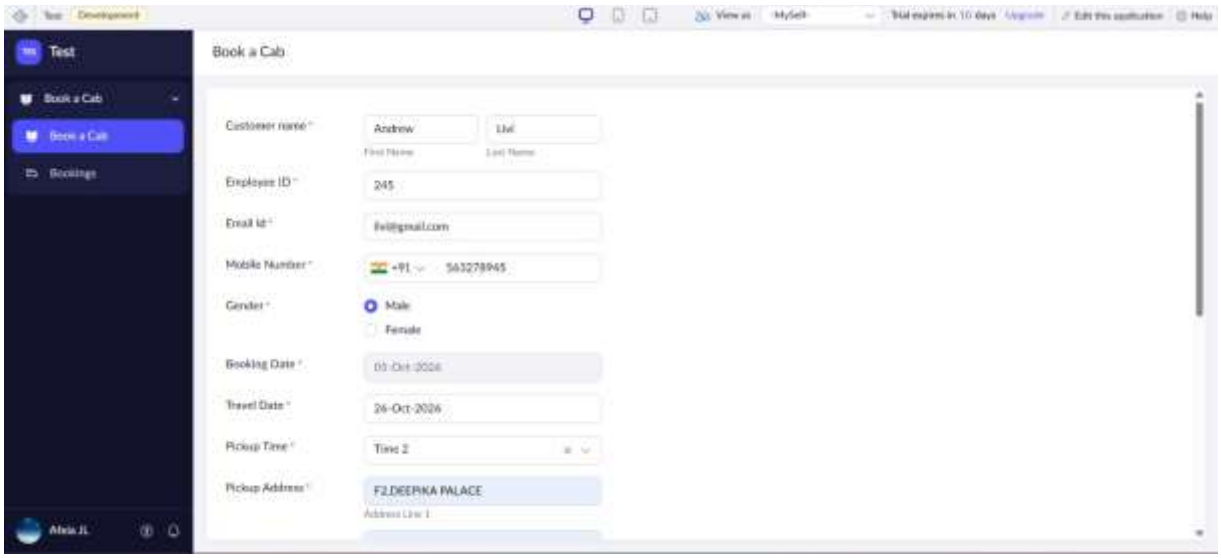

Aim

To create a **Car Booking Reservation System** using **Zoho One** as a cloud-based Software as a Service (SaaS) application.

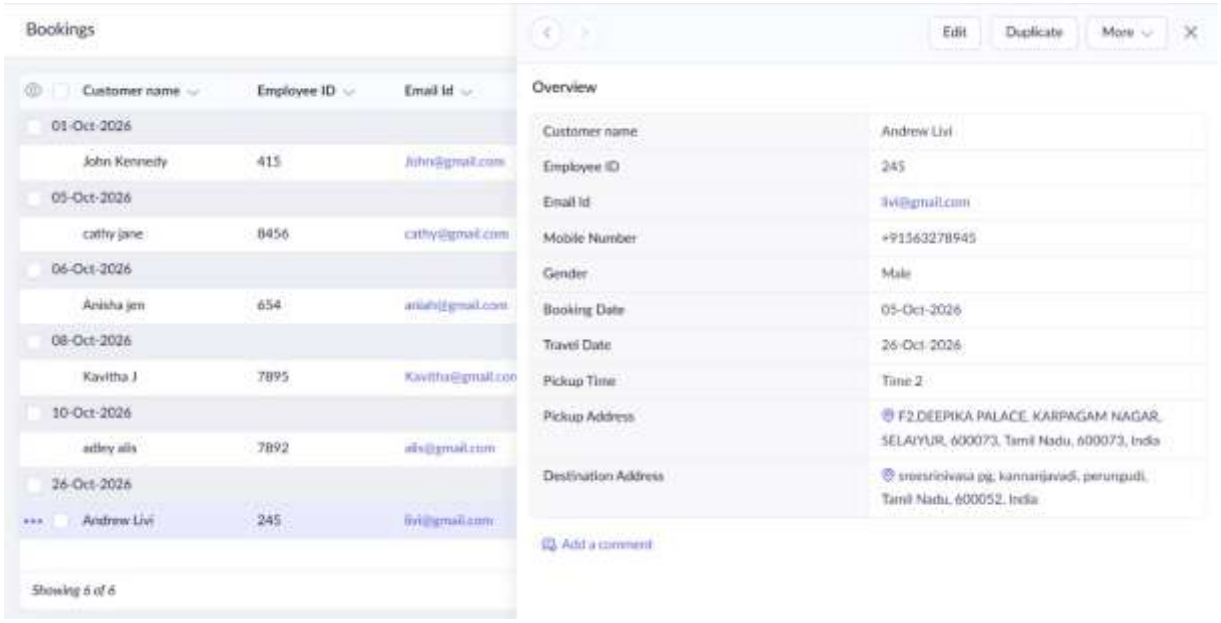

Procedure

1. Log in to the Zoho One cloud platform using your credentials.
2. Open Zoho Creator from the list of applications.
3. Create a new application named Car Booking Reservation System using a pre-designed template.
4. Select the appropriate booking template and customize it according to the requirements of the car booking system.
5. Open the existing booking form and modify its fields to include the required details, such as customer name, employee ID, email ID, mobile number, gender, booking date, travel date, and pickup time.
6. Add or modify fields for From, To, Rental, Outstation, Package Type, and Hours/Days as required.
7. Configure the field types appropriately, using text fields for addresses, dropdowns for package types, date fields for travel dates, and suitable selection fields for booking options.
8. Customize the form layout by arranging the fields properly and setting mandatory fields where necessary.
9. Save the changes and publish the customized application.
10. Enter sample customer and cab booking details into the form and submit the booking.
11. Open the Bookings section to verify that the submitted booking details are stored correctly in the cloud database.
12. Test the application by entering different booking details and verify that the Car Booking Reservation System functions successfully as a Software as a Service (SaaS) application.

Implementation Input:

Output:

Result

Thus, a **Car Booking Reservation System** was successfully created using **Zoho One** and demonstrated as a **Software as a Service (SaaS)** application.
